

Tiny Tapeout 06+ Demo Board

User Input + Config

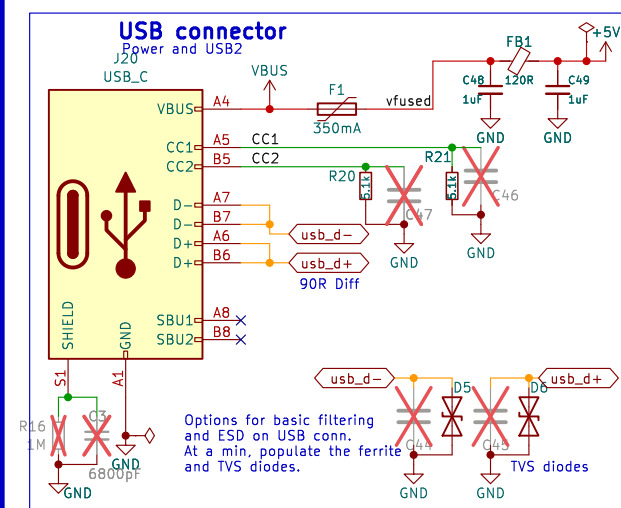

Momentary Switches (debounced)

RP Boot Mode

Power

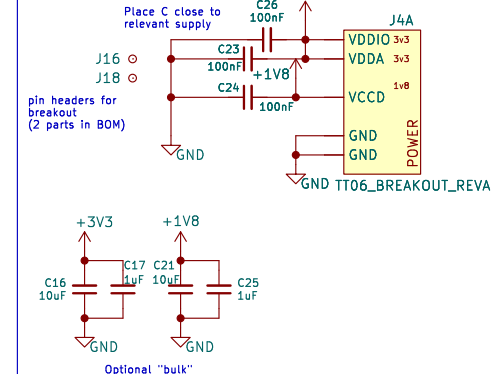

3V3 LDO

1.8V LDO

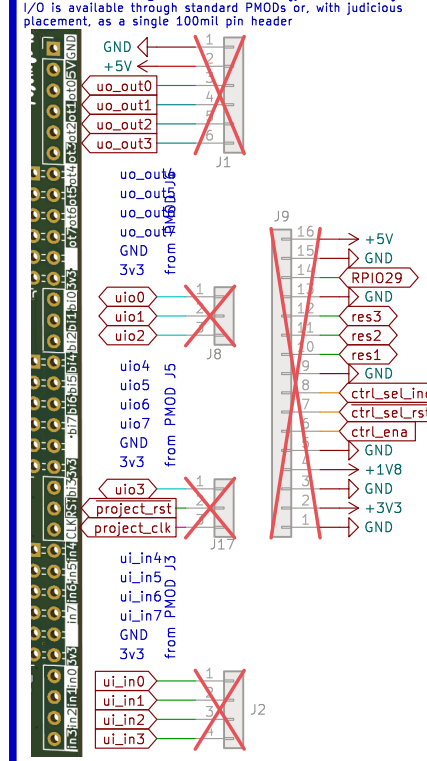

TT Carrier Power

TT06+ Demoboard: complete re-organization, support for TT06+ new carrier pinout. For users, main difference is the new piano DIP input and the fact no MUX is in the way on demoboards.

<https://github.com/TinyTapeout/tt-demo-pcb>

Board edge connectors (pinheaders)

RP2040 Basic Support

IOVDD \square **IOVDD**

Logic supply, nominally 3v3.

BOOT_MODED \square **QSPL_SS**

When held low on powerup, flash SS determines boot mode
(HIGH == flash boot, LOW == USB device)

Flash program header
Note: should we replace 3v3 with RUN, to be able to reset/hold while updating flash?

Rule of thumb
 $C1, C2 = 2 * CL - 2 * C_{stray}$
Using a stray cap of 5pF, gives $C_n = 6pF$

Into:
 $CL = (C1 * C2) / (C1 + C2) + C_{stray}$
These C_n are 6pF give
 $CL = 8pF$ -- just what we need.

USB_VDD supplies USB PHY, nominal 3v3. If IOVDD is 3v3, can share supply.

In fact, in this and many applications, IOVDD, USB_VDD and ADC_AVDD are all powered directly from a single 3v3 supply, with the 1v1 digital core being handle by on-board regulator.

VREG_VOUT: int core regulator, 1.1V
Can supply DVDD
Place 1uF in/out bypass near pin.

R36 10k

GND 1uF 1v1

DVDD

IOVDD

USB_VDD

ADC_AVDD

VREG_IN

GPIO00 through GPIO25

GPIO26_ADC0 through GPIO29_AD3

TESTEN

Factory test mode: GND

U6 RP2040

Flash

Note: SS pulled-up externally, from bootmode switch

Quad SPI requires QE bit in status register--2 to be set.
In this case, WP becomes I02 and HOLD becomes I03.

Supply bypass, place near 1, 10, 22, 33, 42, 49

Supply bypass, near 23, 50
